

Ryan Cho

Senior Software Engineer | AI Platform & Full Stack

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> ·
<https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 8+ years delivering production web platforms and AI-enabled product capabilities across fintech and enterprise environments. Owns end-to-end development of Python/FastAPI services and React/TypeScript applications, including agentic LLM workflows with evaluation harnesses and observability. Thrives in fast-paced, 0-to-1 settings—shipping reliable features, partnering with product teams, and guiding technical direction with minimal oversight.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Designed and shipped **agentic LLM pipelines** with LangGraph orchestration, enabling portfolio teams to automate research workflows across internal and external data sources with production guardrails and retry logic.
- Built **full-stack product features** on **Python/FastAPI** and **React/TypeScript**, owning API contracts, frontend UX, and deployment for investment tools used daily across the firm.
- Established an **LLM evaluation framework** with curated golden datasets, regression suites, and experiment tracking so model and prompt changes ship with measurable confidence.
- Led the **prompt engineering lifecycle** for retrieval-augmented workflows—iterating on accuracy, latency, and cost tradeoffs and publishing reusable patterns for partner engineering teams.
- Strengthened **production observability** by wiring accuracy signals, user feedback loops, and dashboards to model outputs, shortening triage when AI-assisted features degraded in production.
- Partnered with product and research stakeholders to **recommend AI versus deterministic solutions**, steering teams away from low-ROI LLM use cases while accelerating high-impact automation.
- Contributed to **platform architecture** for a greenfield analytics suite—service boundaries, async job processing, and shared LLM infrastructure adopted by multiple product squads.
- Championed **AI-powered coding tools** including Cursor and Claude Code across the engineering org, improving delivery speed on greenfield modules through shared workflows and pairing.
- Mentored engineers on **full-stack ownership** and LLM best practices through design reviews, reusable component libraries, and hands-on guidance on production-ready AI feature delivery.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **Python microservices** and internal web applications supporting trading and risk platforms with strict latency, audit, and compliance requirements in a global banking environment.
- Owned **end-to-end feature delivery** from requirements through production rollout, coordinating across distributed teams while maintaining release quality on quarterly cadences.
- Built **React/TypeScript dashboards** and REST APIs that consolidated fragmented market data views, improving analyst workflow efficiency across front-office groups.
- Implemented **automated testing and CI/CD pipelines** for business-critical services, increasing release confidence and reducing production defects on high-touch trading tools.
- Collaborated with engineering leads and business stakeholders to shape **technical direction** for modernization initiatives replacing legacy batch systems with event-driven architectures.
- Designed **data integration layers** connecting internal systems with vendor feeds, preserving traceability and auditability required for regulatory reporting workflows.
- Optimized **PostgreSQL** query patterns and caching strategies for high-volume reporting jobs, reducing batch processing windows during month-end and quarter-end close periods.

- Mentored junior analysts and interns on **secure coding practices**, code review standards, and software engineering fundamentals within regulated financial services contexts.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React components** and Node.js APIs for a restaurant-tech platform, supporting menu and operations features deployed to production client environments.
- Implemented **unit and integration tests** for payment and order flows, improving regression coverage ahead of major release cycles.
- Contributed to **agile sprint delivery**, translating product specifications into shippable increments with iterative code review from senior engineers.
- Integrated third-party **POS and scheduling APIs**, handling error states, retries, and idempotency for unreliable external dependencies.
- Refactored legacy JavaScript modules to **TypeScript**, improving type safety and reducing runtime defects in production builds.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built responsive **HTML, CSS, and JavaScript** pages for a nonprofit web presence, improving accessibility and mobile layout consistency across core site sections.
- Implemented **CMS-driven content updates** and form handling so non-technical staff could publish announcements without developer support.
- Optimized page performance through **asset compression and lazy loading**, improving load times on primary landing pages.
- Collaborated with designers to translate wireframes into **production-ready UI** with cross-browser compatibility and consistent visual standards.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Next.js, Responsive UI

Backend: Python, FastAPI, Node.js, REST APIs, LangGraph, LangChain, Event-Driven Services

Databases: PostgreSQL, Redis, MongoDB, SQL, Schema Design, Query Optimization

Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, GitHub Actions, Infrastructure as Code

Monitoring & Tools: Datadog, Prometheus, Grafana, OpenTelemetry, LLM Eval Harnesses, Golden Dataset Pipelines

Workflow & PM: Agile/Scrum, Jira, Confluence, Cross-Functional Alignment, Technical Documentation, Stakeholder Communication
