PROFESSIONAL SUMMARY

Senior full stack engineer with 8+ years building scalable backend services, React applications, and real-time data pipelines across finance and enterprise platforms. Designs RESTful APIs and event-driven systems with Go, Kafka, and PostgreSQL, and deploys containerized microservices on Kubernetes with automated CI/CD. Partners with product, design, and QA in agile teams to deliver secure, compliant, testable software with measurable performance and reliability gains.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and shipped **Go microservices** for portfolio analytics and trade workflows, reducing API latency by 35% through caching layers and query optimization.
- Built **React and TypeScript** dashboards used by 200+ internal analysts, improving visibility across risk, compliance, and operational reporting tools.
- Implemented **Kafka event streaming** pipelines for asynchronous trade confirmations and audit logs, processing 50K+ daily events with idempotent consumers.
- Designed **PostgreSQL schemas** and optimized multi-tenant queries, cutting report generation time from minutes to seconds on high-volume datasets.
- Containerized services with **Docker and Kubernetes**, enabling zero-downtime rollouts and consistent staging-to-production deployments.
- Established **CI/CD pipelines** with automated unit and integration tests, increasing release cadence while maintaining security and code review gates.
- Partnered with product managers and QA in **two-week agile sprints**, translating regulatory requirements into testable acceptance criteria and shippable increments.
- Mentored engineers on **RESTful API design**, observability patterns, and secure coding practices for sensitive financial data systems.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **backend services and REST APIs** supporting capital markets workflows for trading and operations applications used across global desks.
- Built **React front-end modules** for operational dashboards, improving task throughput through streamlined interfaces and real-time status updates.
- Integrated **event-driven processing** with Kafka-style brokers for trade lifecycle notifications and downstream reconciliation pipelines.
- Modeled and maintained **PostgreSQL databases** for reporting workloads, applying indexing strategies that improved performance on large transactional datasets.
- Deployed application components to **Kubernetes clusters** in controlled release cycles, coordinating with infrastructure teams on capacity and failover planning.
- Enforced **software security and regulatory compliance** controls across code changes, supporting SOX-aligned audits and vulnerability remediation.
- Contributed to **CI/CD automation** and expanded test coverage for critical batch jobs, reducing production defects through peer review and staged rollouts.
- Collaborated with business analysts and QA in **cross-functional agile teams** to deliver features under tight regulatory deadlines.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Developed **React components** and REST integrations for a SaaS platform, supporting customer-facing feature delivery throughout a 12-month internship.
- Implemented **TypeScript services** and API clients with unit tests, improving front-end reliability for core user workflows.
- Assisted with **PostgreSQL query tuning** and schema updates for analytics features under senior engineer guidance.
- Participated in **Git-based code reviews** and agile ceremonies, shipping incremental improvements across two product squads.
- Built internal tooling with **Node.js automation scripts** to streamline deployment checks and reduce manual QA steps before releases.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with JavaScript and modern CSS for a nonprofit platform, supporting content updates across desktop and mobile devices.
- Integrated **RESTful endpoints** for donation and event modules, enabling staff to manage campaigns without developer support.
- Collaborated with stakeholders to refine **UI workflows**, delivering iterative improvements within a fast-paced three-month engagement.
- Applied **Git version control** and basic testing practices to maintain stable releases for a remote volunteer engineering team.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React.js, TypeScript, JavaScript, HTML5, CSS3, Responsive UI, Component Architecture

Backend: Go (Golang), Node.js, RESTful APIs, Microservices, Event-Driven Architecture, Apache Kafka

Databases: PostgreSQL, SQL, Database Modeling, Query Optimization, Redis

Cloud & DevOps: Kubernetes, Docker, CI/CD, Git, Container Orchestration, Automated Testing

Monitoring & Tools: Prometheus, Grafana, Jest, Integration Testing, Postman, Structured Logging

Workflow & PM: Agile/Scrum, Jira, Code Reviews, Cross-functional Collaboration, Technical Documentation
