

Ryan Cho

Full Stack Product Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 7+ years building production web applications across finance and investment operations. Owns problems end-to-end—from stakeholder discovery and requirements through Python/React implementation, AWS deployment, and production monitoring. Experienced with AI-assisted development, PostgreSQL data modeling, and reliable SaaS delivery in remote teams.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end delivery** of portfolio analytics workflows for investment operations, translating ambiguous stakeholder requests into scoped requirements and iterative releases.
- Built **React and Python services** for client-facing dashboards with authentication, failure handling, and input validation so production behavior stayed predictable under load.
- Designed **PostgreSQL schemas and query paths** for holdings and exposure data, reducing report latency through indexing, batching, and careful data modeling.
- Partnered with product and business leads in **remote planning sessions** to prioritize roadmap work, surface delivery risks early, and align functional expectations before build.
- Deployed and maintained **AWS-hosted application infrastructure**, defining non-functional standards for uptime, rollback safety, and staging-to-production parity.
- Instrumented services with **monitoring, alerting, and structured logging**, participating in on-call rotations to debug incidents and restore user-facing systems quickly.
- Adopted **AI-assisted development workflows** (Cursor, Claude) to accelerate implementation while reviewing generated code for correctness, security, and maintainability.
- Authored **documentation and enablement materials** after major launches, improving handoffs and reducing repeat support questions from internal users.
- Mentored engineers on **code review discipline and ownership habits**, raising team throughput while keeping quality and operational readiness high.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **internal trading and risk tooling** for fixed income technology teams, converting partner feedback into actionable engineering specifications.
- Developed **Python automation** for data reconciliation and operational reporting, replacing manual spreadsheet steps with auditable batch jobs.
- Built **web interfaces** surfacing compliance and position data to analysts, prioritizing clarity for non-technical stakeholders under tight release windows.
- Collaborated with distributed teams on **requirements grooming**, clarifying edge cases in trade lifecycle events before changes reached production.
- Strengthened **reliability practices** by adding regression tests, structured logging, and failure recovery paths to legacy services in active use.
- Supported **production issue triage** during market hours, debugging data discrepancies and coordinating fixes with operations and upstream providers.
- Contributed to **API integrations** connecting front-office applications with reference data services and documenting contracts for downstream consumers.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** for check tracking features, pairing with senior engineers on state management patterns and accessibility fundamentals.
- Built **REST API consumers and form flows** connecting mobile-friendly UI to backend services with validated user input and error states.
- Wrote **unit and integration tests** improving confidence in checkout and authentication paths before intern-led releases shipped.
- Participated in **code reviews and sprint planning**, learning to translate ticket descriptions into concrete, testable implementation tasks.
- Documented **local development setup and API usage**, shortening onboarding time for subsequent engineering interns on the team.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for nonprofit outreach campaigns using HTML, CSS, and JavaScript with cross-browser compatibility.
- Integrated **CMS content updates and donation forms**, ensuring submissions routed reliably to foundation stakeholders.
- Optimized **page load performance** through asset compression and lazy loading on content-heavy landing pages.
- Coordinated with remote volunteers on **design feedback loops**, iterating layouts based on accessibility and mobile usability reviews.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML/CSS, Redux, responsive UI, component architecture

Backend: Python, Django, Node.js, REST APIs, GraphQL, authentication, service design

Databases: PostgreSQL, Redis, SQL optimization, schema design, data modeling

Cloud & DevOps: AWS (EC2, Lambda, S3, RDS), Docker, CI/CD pipelines, infrastructure as code

Monitoring & Tools: Datadog, Sentry, CloudWatch, Git, Jest, Pytest, Cursor, Claude

Workflow & PM: Jira, Confluence, Agile/Scrum, stakeholder requirements, technical documentation, remote collaboration
