PROFESSIONAL SUMMARY

Software engineer with 7+ years building and maintaining production systems across finance and enterprise platforms. Deep experience in Java, object-oriented design, React, and JavaScript with full SDLC ownership from requirements through deployment. Proficient in Agile delivery, Git-based workflows, automated testing, and CI pipelines. Collaborative engineer who produces maintainable, specification-driven code and clear technical documentation for mission-critical applications.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Designed and developed **Java-based services** supporting portfolio analytics and reporting workflows used daily by investment operations teams across multiple business units.
- Built **React dashboards** with RESTful integrations that consolidated fund performance data, reducing manual reconciliation effort and improving analyst turnaround time.
- Owned **automated test suites** and CI pipeline enhancements that increased release confidence and shortened validation cycles for production deployments.
- Led **cross-functional design sessions** with product owners and QA engineers to refine technical approaches for ambiguous feature requests and evolving specifications.
- Implemented **PostgreSQL schema optimizations** and query tuning that improved report generation latency for high-volume transaction datasets.
- Authored **design and API documentation** in Confluence aligned to team standards, enabling faster onboarding and consistent implementation across engineer rotations.
- Debugged and resolved **production defects** in distributed services using structured logging and root-cause analysis to prevent recurring operational incidents.
- Mentored **junior developers** on Java patterns, Git workflows, and code review practices while contributing to sprint planning and task estimation in Jira.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **Java enterprise modules** within trading and risk technology stacks, delivering maintainable components through the full software development lifecycle.
- Participated in **Agile ceremonies** and sprint delivery using Jira and Bitbucket, coordinating with multi-disciplinary teams across front-office and technology groups.
- Built **REST and SOAP integrations** exposing financial data via JSON and XML payloads for downstream consumption by internal analytics platforms.
- Created **automated unit and integration tests** within CI workflows to validate specification compliance before promoting builds to staging environments.
- Supported **Oracle and SQL Server** data access layers with optimized queries supporting batch reconciliation and regulatory reporting pipelines.
- Troubleshooted **mission-critical production issues** under time pressure, isolating defects in legacy services and deploying targeted fixes with minimal customer impact.
- Documented **technical specifications and test plans** for feature enhancements, supporting audit readiness and knowledge transfer across analyst rotations.
- Collaborated with **senior engineers** on object-oriented design for new product capabilities where requirements were evolving and customer priorities shifted frequently.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** and JavaScript features for a remote check-processing platform, following established patterns and participating in code reviews.
- Integrated **REST APIs** with JSON payloads to connect frontend workflows with backend services handling document validation and status tracking.
- Wrote **unit tests** for new functionality and supported CI builds, helping the team catch regressions before releases to production.
- Used **Git and Bitbucket** for feature branching and pull requests while collaborating with engineers across design, development, and testing tasks.
- Contributed to **HTML, CSS, and responsive layout** fixes that improved usability for operations staff reviewing transaction submissions daily.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **HTML, CSS, and JavaScript** pages for a nonprofit web presence, translating design requirements into functional, maintainable frontend code.
- Assisted with **backend form handlers** and data retrieval logic, gaining early exposure to full-stack development practices and debugging techniques.
- Used **Git version control** for incremental feature delivery and coordinated changes with a small remote development team.
- Supported **cross-browser testing** and defect fixes to ensure consistent rendering across desktop environments.
- Helped update **content and layout components** based on stakeholder feedback while learning structured development workflows.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML, CSS, Redux, XML

Backend: Java, Spring Boot, C++, Node.js, REST APIs, SOAP, JSON

Databases: PostgreSQL, Oracle, MySQL, SQL Server, MongoDB

Cloud & DevOps: Git, Bitbucket, Jenkins, Docker, CI/CD, Linux, Windows, macOS

Monitoring & Tools: Jira, Confluence, Maven, Gradle, Apache Tomcat, JBoss

Workflow & PM: Agile/Scrum, SDLC, Technical Documentation, MS Office
