PROFESSIONAL SUMMARY

Full stack software engineer with eight years of experience delivering production web platforms across financial services and SaaS. Builds responsive React front ends, Node.js and Java microservices, and RESTful APIs backed by PostgreSQL and MongoDB. Comfortable owning AWS deployments, CI/CD automation, and Agile sprint delivery while partnering with product and operations stakeholders on reliable, scalable releases.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Led end-to-end delivery of an **investment operations portal** used by portfolio managers and analysts, unifying reporting workflows across three internal teams and reducing manual reconciliation effort by roughly 35%.
- Architected a **React and TypeScript** front end with modular component libraries and responsive layouts, improving page load performance and accessibility compliance across desktop and mobile views.
- Built **Node.js and Java Spring Boot** services exposing RESTful APIs for trade data, document ingestion, and user permissions, supporting consistent contracts consumed by web and batch clients.
- Designed **PostgreSQL and MongoDB** schemas for transactional records and unstructured research artifacts, balancing normalization, indexing strategy, and query latency under growing data volume.
- Deployed and maintained workloads on **AWS** using EC2, S3, Lambda, and RDS with infrastructure-as-code pipelines, enabling repeatable environment promotion from development through production.
- Established **CI/CD automation** with Git-based branching, automated test gates, and staged releases that shortened deployment cycles while preserving rollback paths for critical finance applications.
- Partnered with product, compliance, and operations stakeholders in **Agile Scrum** ceremonies to translate business requirements into technical designs, acceptance criteria, and incremental delivery plans.
- Mentored two junior engineers on **full stack debugging**, API design, and production incident response, raising code review quality and reducing recurring defects in shared services.
- Diagnosed and resolved production issues across the stack using structured **root-cause analysis**, logging, and monitoring alerts, restoring service stability during high-volume reporting periods.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Contributed to a **global markets dashboard** supporting traders and risk teams, delivering HTML, CSS, and JavaScript interfaces integrated with internal pricing and position services.
- Developed **Java and Python** back-end components and RESTful APIs for reference data and reporting workflows, enabling downstream applications to consume consistent, validated datasets.
- Implemented data access layers across **Oracle and MongoDB**, optimizing queries and batch jobs that processed large daily volumes while meeting strict latency targets for business users.
- Automated deployment and configuration steps through **Git-based release practices** and Jenkins pipelines, improving release consistency across development, UAT, and production environments.
- Collaborated with cross-functional teams in **Agile sprints** to refine user stories, estimate work, and deliver incremental enhancements aligned with regulatory and operational deadlines.
- Resolved integration defects and performance bottlenecks through systematic **troubleshooting** across front-end, service, and database layers during peak trading support windows.
- Documented API contracts, runbooks, and environment setup guides that reduced onboarding time for **new team members** and improved handoffs between development and operations groups.

- Supported cloud migration initiatives by containerizing select services and validating behavior in **AWS test environments**, contributing to a more scalable hosting footprint for internal tools.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React components** for a customer-facing web application, implementing responsive layouts with HTML, CSS, and JavaScript aligned to design specifications and usability feedback.
- Integrated front-end views with **Node.js REST APIs** for account and order workflows, handling authentication, validation, and error states to improve reliability for end users.
- Wrote unit and integration tests with Jest and Postman collections, increasing coverage on critical paths and catching regressions before **sprint releases**.
- Participated in daily standups and code reviews within an **Agile team**, translating feature requests into scoped tasks and documenting implementation decisions for future maintainers.
- Profiled and fixed front-end performance issues related to bundle size and render cycles, delivering measurable improvements to **initial load time** on key application screens.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed and launched a **responsive nonprofit website** using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and accessible navigation for donors and volunteers.
- Configured content management workflows and form handling with lightweight **back-end scripts**, enabling staff to publish updates without developer intervention.
- Applied version control with **Git** for feature branches and peer review, maintaining a stable main branch throughout a short delivery cycle.
- Troubleshoot layout and hosting issues across development and production environments, restoring pages quickly and documenting fixes for the **maintenance team**.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React, responsive UI design, component architecture, accessibility

Backend: Node.js, Java, Spring Boot, Python, RESTful API design, microservices, authentication and authorization

Databases: PostgreSQL, MongoDB, Oracle, SQL modeling, indexing, query optimization, schema design

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS), Docker, Jenkins, Git, CI/CD pipelines, infrastructure as code

Monitoring & Tools: CloudWatch, structured logging, Postman, Jest, webpack, Chrome DevTools, performance profiling

Workflow & PM: Agile, Scrum, Jira, cross-functional collaboration, technical documentation, stakeholder communication
