

Ryan Cho

Full Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full stack software engineer with 5+ years delivering React and Python web applications in regulated, team-based environments. Builds RESTful APIs, accessible UIs, and PostgreSQL-backed services deployed with Docker on AWS. Writes pytest and Jest coverage, maintains OpenAPI documentation, and practices trunk-based CI/CD with feature flags. Experienced in enterprise settings requiring security discipline, compliance alignment, and audit-ready technical documentation.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned **end-to-end feature delivery** across **React** interfaces and **Python** services, shipping incremental releases through **trunk-based development**, short-lived branches, and **feature flags** to de-risk production rollouts.
- Designed **RESTful APIs** with request validation, versioning, structured error handling, and **OpenAPI** documentation adopted by partner engineering teams integrating with the investment platform.
- Developed **responsive, Section 508-aligned** React experiences, partnering with design and QA to remediate accessibility findings before each production deployment cycle.
- Implemented **PostgreSQL** schemas, migrations, and tuned queries powering portfolio reporting workflows that processed daily operational datasets across multiple business units.
- Packaged services with **Docker** and deployed containerized workloads to **AWS** (ECS, RDS, S3), diagnosing cloud-hosted incidents and stabilizing runtime configuration under peak trading windows.
- Built automated **pytest** and **Jest/React Testing Library** suites for critical user journeys, integrating unit and integration coverage into **GitHub Actions** pipelines that gated merges to main.
- Produced architecture decision records, API guides, and data model diagrams that shortened onboarding for engineers joining the platform team and supported internal audit inquiries.
- Mentored engineers on **code review**, secure API patterns, and test design while coordinating roadmap delivery with product owners and compliance stakeholders across remote squads.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered internal web applications and **REST services** within a **regulated banking environment**, following change-control, audit logging, and release approval standards required for enterprise technology operations.
- Built **Python** and Java backend components processing trade and risk datasets, with **PostgreSQL** models supporting reconciliation pipelines ahead of quarter-end regulatory reporting deadlines.
- Created **React** operational dashboards that surfaced batch job health and exception queues, enabling technology analysts to triage production failures across distributed back-office systems.
- Automated build and deployment steps through **CI/CD** workflows using **GitHub Actions** and infrastructure scripts, reducing manual release overhead for controlled staging and production promotions.
- Authored **pytest** and front-end regression tests for high-risk modules, improving release confidence during peak-volume reporting periods and platform modernization initiatives.
- Collaborated with security and infrastructure teams to harden **API authentication** flows and environment configuration for remote engineering delivery during a multi-year core systems upgrade.
- Maintained service contracts, deployment runbooks, and data lineage documentation referenced in internal compliance reviews and cross-team incident postmortems.
- Supported agile sprint delivery across summer, incoming, and full-time **Technology Analyst** rotations, consistently meeting stakeholder milestones while balancing production support and feature development.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Shipped **full stack** enhancements for a document workflow product using **React** and Node.js, supporting customer onboarding flows used daily by internal operations staff.
- Implemented **REST API** endpoints with input validation and consistent error responses, allowing the client application to handle edge cases without silent data loss.
- Added **unit and integration tests** for new modules, catching regressions before merge and reinforcing team confidence during rapid iteration on customer-facing features.
- Participated in **code reviews** and pair programming sessions, applying feedback on component structure, state management, and API contract clarity across the internship tenure.
- Documented local setup, service behavior, and release checklists in team wikis, helping subsequent contributors ramp onto the codebase within their first sprint.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built foundation program and marketing pages with **HTML, CSS, and JavaScript**, improving mobile layout consistency and page responsiveness for public visitors.
- Integrated lightweight **CMS** updates and form handlers that allowed non-technical staff to publish content without recurring engineering support.
- Applied **accessibility** checks on navigation, contrast, and keyboard interactions for public-facing pages, aligning layouts with readability expectations for diverse audiences.
- Collaborated with a **remote** volunteer engineering lead to scope enhancements and deliver fixes within tight nonprofit release windows during the fall program cycle.
- Refactored shared styles and scripts to reduce duplication across site sections, simplifying ongoing content maintenance for the foundation web team.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript/TypeScript, HTML5, CSS3, Responsive Design, Section 508 Accessibility, React Testing Library, Jest

Backend: Python, FastAPI, REST API Design, OpenAPI/Swagger, Node.js, API Validation, Error Handling, Versioning

Databases: PostgreSQL, SQL Migrations, Stored Procedures, Query Optimization, Relational Data Modeling

Cloud & DevOps: AWS (ECS, RDS, S3), Docker, Terraform, GitHub Actions, CI/CD Pipelines, Container Deployment

Monitoring & Tools: pytest, Git, Feature Flags, OpenAPI Documentation, Architecture Decision Records, Developer Guides

Workflow & PM: Trunk-Based Development, Agile/Scrum, Technical Documentation, Cross-Functional Collaboration, Code Review
