

Ryan Cho

Senior Full-Stack Software Engineer

+1 608 360 1459 · Ryanmcho100@gmail.com · <https://www.linkedin.com/in/ryan-cho-2020/> · <https://github.com/Chomama> · New York, United States

PROFESSIONAL SUMMARY

Full-stack software engineer with 7+ years building scalable web platforms across React and Python. Led end-to-end delivery of data-intensive applications, REST and async APIs, and performant UIs for analysts and operations teams. Partnered with product, data, and domain experts to translate complex workflows into reliable, testable systems. Experienced in Docker, CI/CD, PostgreSQL, and AWS with a focus on clean architecture, documentation, and cross-functional technical leadership.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered **full-stack platform capabilities** with **React**, **TypeScript**, and **Python** services supporting portfolio analytics workflows used daily by investment teams across multiple business units
- Built **REST and async APIs** with **FastAPI** for ingestion, validation, and state management of complex datasets, reducing report generation latency by **35%** across high-volume batch pipelines
- Designed **high-density React dashboards** and reusable component libraries with Tailwind-based styling, improving analyst throughput on multi-tab research and review workflows
- Led **cross-functional delivery** with product, quants, and operations stakeholders to align **technical design**, release sequencing, and acceptance criteria for business-critical milestones
- Implemented **Docker-based** development environments and extended **GitLab CI/CD** pipelines with automated test gates, lowering deployment failures and production rollback frequency
- Optimized **PostgreSQL** query plans, indexing, and caching for time-series holdings data, sustaining sub-second reads as concurrent user load increased across the platform
- Mentored **two junior engineers** on code review standards, testing discipline, and frontend performance profiling, improving merge quality and review turnaround across the squad
- Established **integration test suites** and OpenAPI documentation conventions that improved reliability of handoffs between frontend and backend teams during parallel feature development

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack internal applications** with React and **Python** microservices supporting trade operations, compliance reporting, and analyst review for global markets desks
- Built **interactive data modules** for high-volume tabular datasets, enabling operations teams to filter, audit, and reconcile positions through responsive, keyboard-friendly interfaces
- Implemented **Flask** and **FastAPI** endpoints for multi-step record updates, validation rules, and audit trails across approval workflows spanning risk and operations stakeholders
- Partnered with **data engineering and risk teams** to integrate ETL outputs into production web UIs, defining schema contracts and resilient error handling for release-critical pipelines
- Containerized application services with **Docker** and contributed to Jenkins and GitLab pipeline stages for automated testing and staged environment promotion
- Authored **technical documentation**, unit tests, and runbooks that reduced onboarding time for rotating analyst-engineer pairs supporting live trading support tools

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Contributed to **React** features for customer-facing check management workflows, implementing component structure and state patterns alongside senior engineers during active product iteration

- Assisted in building **Node.js API** endpoints for form submissions and status tracking with input validation, pagination, and structured error responses for client integrations
- Wrote **unit and integration tests** for priority UI flows, helping stabilize releases ahead of pilot customer onboarding and early production traffic
- Participated in **code reviews** and sprint ceremonies, adopting Git branching conventions and documentation practices used across the engineering organization
- Resolved **layout and accessibility** issues in data-dense tables and forms, improving readability and usability on lower-resolution displays used by operations staff

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** with HTML, CSS, and JavaScript for nonprofit program content, supporting consistent layouts across mobile and desktop viewports
- Integrated **third-party form and analytics** scripts with attention to load performance and cross-browser compatibility for public-facing campaign pages
- Collaborated with program stakeholders to translate **content requirements** into publishable site updates within a fast-moving volunteer delivery schedule
- Maintained **Git-based** version control and lightweight deployment checklists for incremental feature releases and content corrections

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, shadcn/ui patterns, High-density UI design, Component libraries, State management, Data visualization

Backend: Python, FastAPI, Flask, Node.js, REST APIs, Async services, API design, Microservices, Input validation, OpenAPI/Swagger

Databases: PostgreSQL, SQL, Query optimization, Indexing, Redis, Relational data modeling

Cloud & DevOps: AWS, Docker, GitLab CI/CD, Jenkins, Containerization, Environment configuration, Automated deployment pipelines

Monitoring & Tools: Git, Jest, Pytest, Integration testing, API documentation, Performance profiling, Browser dev tools

Workflow & PM: Agile/Scrum, Cross-functional collaboration, Technical mentorship, Stakeholder communication, Requirements translation, Jira
