PROFESSIONAL SUMMARY

Full stack engineer with 8+ years building and scaling SaaS and fintech platforms across React, TypeScript, and Node.js. Led end-to-end feature delivery, service decomposition, and API modernization in distributed production environments. Partners with product and design to ship reliable enterprise capabilities while mentoring engineers and improving delivery tooling, observability, and on-call practices.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of **enterprise scheduling and workflow features** using **React**, **TypeScript**, and **Node.js** services, spanning technical discovery through production release and ongoing maintenance across a **multi-tenant SaaS platform**.
- Led **monolith decomposition** initiatives by extracting bounded contexts into **Node.js microservices** with well-defined **REST APIs**, improving deployment independence and reducing blast radius for critical customer-facing modules.
- Designed and shipped **PostgreSQL** schema changes and **Redis** caching layers that sustained low-latency reads under **peak concurrent usage**, while preserving data integrity across distributed transactions.
- Built **internal delivery tooling** and CI automation that shortened release validation cycles and standardized service rollout patterns across squads adopting **Kubernetes** on **Google Cloud Platform**.
- Partnered with Product and Design in agile ceremonies to refine requirements for **high-impact enterprise capabilities**, translating ambiguous needs into implementable technical plans and phased rollout strategies.
- Mentored **three junior engineers** through code reviews, pairing sessions, and structured implementation feedback, raising team throughput on shared platform components without compromising code quality.
- Participated in **on-call rotation** for production systems, diagnosing root causes across service boundaries and deploying **maintainable fixes** that restored availability during incident response.
- Integrated **LLM-assisted workflows** into backend services using **distributed API** patterns, validating model outputs and hardening prompts to keep generated automation reliable in regulated fintech contexts.
- Drove cross-squad engineering practice improvements by authoring **pull request standards**, shared testing guidance, and reusable service templates adopted by multiple feature teams.

Technology Analyst, Incoming Technology Analyst, Technology

May/2019 - Apr/2022

Summer Analyst,

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack internal tools** with **JavaScript**, **React**, and backend services supporting trading and operations teams across a **globally distributed** technology organization.
- Maintained and extended **Node.js APIs** interfacing with legacy banking systems and third-party data providers, improving reliability of daily reporting pipelines serving analysts in multiple time zones.
- Contributed to **large-scale refactoring** efforts that modularized tightly coupled application layers, enabling safer incremental releases within a regulated financial environment.
- Implemented automated test suites and deployment checks that reduced regression risk during frequent production pushes across **service-oriented** integration points.
- Collaborated with business stakeholders to translate compliance and workflow requirements into **maintainable software designs** with clear ownership boundaries.
- Optimized **SQL** query paths and application caching for portfolio analytics views, cutting page load times for datasets spanning thousands of positions.

- Supported production incident triage by tracing failures across **distributed services** and documenting remediation steps for on-call handoffs.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Built **React** UI components and REST-integrated pages for a B2B SaaS product, delivering features from mockups through QA-supported production releases.
- Implemented **Node.js** API endpoints for user onboarding flows, enforcing validation and error handling patterns reused across subsequent service modules.
- Wrote unit and integration tests that increased confidence in refactors during rapid internship feature cycles.
- Participated in agile standups and sprint planning, estimating tasks and communicating blockers to senior engineers on a remote engineering team.
- Documented API contracts and component usage to accelerate future feature development by incoming developers.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed responsive **HTML**, **CSS**, and **JavaScript** pages for nonprofit web properties, improving content accessibility and mobile readability.
- Integrated lightweight backend forms and data handlers supporting donation and event registration workflows for foundation stakeholders.
- Coordinated with remote stakeholders to iterate on layout and content updates within tight nonprofit launch timelines.
- Established baseline performance and cross-browser checks before each release to keep public-facing sites stable for campaign periods.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive UI

Backend: Node.js, REST APIs, Microservices, Service-Oriented Architecture, Distributed Systems

Databases: PostgreSQL, Redis, SQL, Schema Design, Query Optimization

Cloud & DevOps: Google Cloud Platform, Kubernetes, Docker, CI/CD Pipelines, Infrastructure Automation

Monitoring & Tools: Observability, On-Call Operations, Git, AI Coding Assistants (Cursor, Copilot), Testing Frameworks

Workflow & PM: Agile/Scrum, Cross-Functional Collaboration, Technical Mentorship, Feature Ownership, Code Review
