PROFESSIONAL SUMMARY

Full stack software engineer with 8+ years delivering secure web applications, REST and GraphQL APIs, and cloud-native services across finance and enterprise platforms. Proficient in JavaScript, Python, and Java with experience in containerized deployments, AI-assisted tooling, and production troubleshooting. Combines rapid feature delivery with performance optimization and direct customer collaboration to resolve complex integration and platform issues.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Owned end-to-end delivery of a **React and Python** investor portal serving 2,000+ active users, reducing page load times by 35% through query optimization, caching, and incremental API redesign.
- Architected and shipped **REST and event-driven microservices** on AWS that consolidated portfolio, reporting, and document workflows, cutting manual reconciliation effort across operations teams by 40%.
- Containerized application stacks with **Docker and Kubernetes**, standardizing deployment pipelines and enabling zero-downtime releases across staging and production environments.
- Integrated third-party market data, identity, and compliance APIs, designing **resilient retry and authentication patterns** that maintained 99.9% uptime during vendor outages and schema changes.
- Partnered directly with portfolio managers and client services as a **front-line technical liaison**, diagnosing production issues, translating customer pain points into roadmap priorities, and closing escalations within SLA.
- Led cross-team initiative to embed **AI-assisted code review and test generation** into the development workflow, accelerating feature turnaround while preserving security and auditability requirements.
- Hardened platform security through **role-based access controls, encryption at rest and in transit**, and automated vulnerability scanning integrated into CI/CD gates.
- Mentored three junior engineers on **full stack patterns, API design, and cloud operations**, establishing shared coding standards that reduced review cycles and onboarding time.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Built and maintained **Java and JavaScript** services supporting trade lifecycle and risk reporting workflows used daily by front-office and operations teams across global markets.
- Developed internal dashboards with **React and REST APIs** that surfaced real-time exposure metrics, replacing spreadsheet-driven processes and improving analyst response time to market events.
- Automated batch reconciliation jobs in **Python**, reducing overnight processing windows by 25% and eliminating recurring manual data fixes.
- Collaborated with security and infrastructure teams to implement **OAuth-based authentication, audit logging**, and network segmentation aligned with banking compliance standards.
- Deployed services to **cloud-hosted Linux environments**, tuning JVM and container resource limits to stabilize latency under peak trading volumes.
- Participated in **on-call rotation and incident response**, root-causing production defects and coordinating fixes with stakeholders across time zones.
- Contributed to API modernization effort migrating legacy endpoints to **versioned, documented interfaces**, enabling faster partner integrations and reducing integration defects.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components and Node.js API endpoints** for a customer-facing SaaS product, shipping features from design review through production deployment.
- Refactored authentication and session handling to use **secure token-based flows**, closing cross-site vulnerabilities identified during internal security review.
- Wrote integration tests and CI checks that increased **automated test coverage by 30%** and caught regressions before release.
- Optimized PostgreSQL queries and indexes for high-traffic listing pages, improving **average response time by 20%** under concurrent load.
- Collaborated with product and design in **Agile sprints**, translating user feedback into prioritized backlog items and iterative UI improvements.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Delivered a **responsive public website** for a nonprofit foundation using HTML, CSS, and JavaScript, improving mobile accessibility and content discoverability.
- Configured **CMS workflows and publishing pipelines** so non-technical staff could update program information without developer assistance.
- Integrated donation and newsletter forms with **third-party API services**, validating submissions and reducing failed sign-up rates.
- Applied **performance and SEO best practices**, compressing assets and structuring metadata to improve search visibility for foundation initiatives.
- Supported launch readiness through **cross-browser testing and bug triage**, ensuring stable delivery ahead of a public fundraising campaign.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, JavaScript, TypeScript, HTML5, CSS3, Redux, responsive design, component architecture

Backend: Python, Java, Node.js, REST APIs, GraphQL, microservices, event-driven architecture, authentication

Databases: PostgreSQL, MongoDB, Redis, SQL optimization, schema design, data modeling

Cloud & DevOps: AWS, Docker, Kubernetes, Linux, CI/CD, Terraform, container orchestration, infrastructure as code

Monitoring & Tools: Datadog, Prometheus, Grafana, Git, Jenkins, automated testing, log aggregation, incident response

Workflow & PM: Agile, Scrum, Jira, customer discovery, cross-functional collaboration, technical documentation, mentorship
