PROFESSIONAL SUMMARY

Full stack software engineer with eight years delivering production TypeScript systems across finance and SaaS. Ships end-to-end vertical slices—schema migrations, backend services, and typed UI—from monorepo workflows. Brings strong relational database design, integration-heavy platforms, async remote collaboration, and practical AI-assisted development guardrails that preserve type safety and engineering hygiene.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Shipped **full vertical slices** in a TypeScript monorepo—database migrations, backend services, and React components—in single PRs with **end-to-end type safety** from schema to UI.
- Led phased rebuild of the **portfolio dashboard and admin console**, replacing legacy workflows used daily by investment operations staff.
- Designed **multi-region deployment patterns** with data-residency controls for investor reporting, keeping regulated holdings metadata within approved jurisdictions.
- Built **custodian and payment integrations** against vendor APIs with inconsistent contracts, normalizing payloads behind typed adapters for downstream analytics.
- Operated a **market-data ingestion pipeline** landing high-frequency events into PostgreSQL, tuning indexes and query plans for responsive portfolio lookups.
- Raised **engineering hygiene** through code review standards that eliminated untyped service boundaries and kept domain logic out of HTTP controllers.
- Established **AI-assisted development workflows** with guardrails for codegen and review, documenting where tooling accelerates delivery versus where it needs human verification.
- Drove **async architectural decisions** in written RFCs across frontend, backend, and data teams, owning build-vs-refactor tradeoffs for third-party risk tooling.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Delivered **TypeScript and Node.js services** supporting credit risk dashboards used by front-office and middle-office teams across global markets divisions.
- Owned **PostgreSQL schema design and migrations** for trade lifecycle data, introducing indexes aligned to recurring reconciliation and reporting query patterns.
- Built **REST APIs** integrating internal pricing engines with downstream Java and C# consumers while preserving strict typing at integration boundaries.
- Supported **regulatory reporting pipelines** by partnering with data engineering to validate ETL outputs against source-of-truth ledger systems before monthly submissions.
- Improved **query performance** on batch reconciliation jobs by analyzing execution plans and restructuring hot paths in high-volume transaction tables.
- Contributed to **remote, async-first delivery**—documenting design decisions in Confluence and unblocking cross-timezone dependencies without synchronous meetings.
- Mentored **junior analysts** on SQL hygiene, migration safety, and testable service layering during sprint onboarding rotations.
- Participated in **technology stack evaluations** for internal tooling, recommending refactor-over-replace paths that reduced maintenance burden on legacy .NET integrations.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React and TypeScript features** for a restaurant payment SaaS product, pairing UI work with Express API changes in the same release cycle.
- Wrote **SQL migrations** and repository queries backing order and tab management flows, following patterns established by senior engineers.
- Added **integration tests** around checkout endpoints, catching regressions in tip calculation logic before production deploys.
- Collaborated in **async Slack threads** to clarify API contracts with backend teammates while working fully remote from New York.
- Refactored shared **component library utilities** to reduce duplication across admin and customer-facing surfaces.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** for a nonprofit foundation site using HTML, CSS, and JavaScript with attention to accessibility and mobile layouts.
- Integrated **third-party donation widgets** and contact forms, coordinating with stakeholders on content updates across remote check-ins.
- Deployed static assets through **Git-based workflows**, learning foundational version control practices under senior developer guidance.
- Optimized page load by **compressing media assets** and deferring non-critical scripts on content-heavy landing pages.
- Documented **deployment steps and CMS handoff notes** so foundation staff could maintain pages after the engagement ended.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: TypeScript, JavaScript, React, Next.js (App Router), HTML5, CSS3, Component Libraries, Responsive UI

Backend: Node.js, NestJS, Express, REST APIs, GraphQL, Event-Driven Services, Schema-First Design

Databases: PostgreSQL, SQL, Schema Migrations, Index Tuning, Query Plan Analysis, Relational Modeling

Cloud & DevOps: AWS, Docker, CI/CD, GitHub Actions, Multi-Region Deployment, Infrastructure as Code

Monitoring & Tools: Datadog, Grafana, Jest, Playwright, ESLint, Prettier, Git, AI Coding Assistants

Workflow & PM: Agile/Scrum, Async RFCs, Technical Mentorship, Code Review, Jira, Confluence
