PROFESSIONAL SUMMARY

Full-stack software engineer with 5+ years building secure, consumer-facing applications and internal platform tooling across fintech and asset management. Skilled in React, Python, and Go microservices, GraphQL APIs, and cloud-native deployment on AWS and Kubernetes. Leads cross-functional initiatives from architecture through production, with experience integrating ML inference workflows and delivering responsive, high-performance user experiences.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and delivered a **consumer-facing portfolio analytics platform** serving 12,000+ active users, owning **React** frontend modules and **Python microservices** from initial design through production release.
- Designed a **GraphQL API layer** consolidating 8 legacy REST endpoints, reducing client payload sizes by 35% and accelerating **feature delivery** for product teams.
- Built **internal developer tooling** including scaffold generators and CI templates that cut new service bootstrap time from days to hours across 6 engineering squads.
- Led migration of core services to **Kubernetes on AWS**, establishing **zero-downtime deployment** patterns and autoscaling policies supporting 3x traffic growth.
- Implemented **ML inference pipeline** integration for document classification features, partnering with data science to deploy models achieving 94% accuracy in production workflows.
- Drove **UX and performance optimizations** including code-splitting and secure authentication flows, improving Lighthouse scores by 28 points and reducing login-related support tickets.
- Mentored **3 junior engineers** through design reviews and pairing sessions, establishing frontend testing standards that increased unit test coverage from 42% to 78%.
- Collaborated with product, design, and compliance stakeholders to align **technical roadmap** with regulatory requirements while maintaining rapid iteration cycles.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack trading support applications** used by 200+ operations staff, delivering **React** dashboards backed by **Go microservices** with strict latency SLAs under 150ms.
- Designed **REST and GraphQL API models** for cross-department data exchange, enabling reusable service contracts adopted by 4 downstream consumer teams.
- Architected **event-driven microservice** modules processing 2M+ daily transactions, implementing idempotent handlers and dead-letter queues for fault tolerance.
- Built **internal automation tooling** reducing manual reconciliation workflows by 60%, saving operations teams an estimated 400 hours per quarter.
- Deployed services to **AWS** using containerized pipelines with infrastructure-as-code, standardizing environments across dev, staging, and production.
- Led an **initiative to modernize a legacy Java monolith** into bounded microservices, coordinating 5 engineers through a phased strangler-fig migration over 14 months.
- Partnered with security and risk teams to implement **OWASP-aligned controls**, encryption at rest, and audit logging across all user-facing endpoints.
- Facilitated **cross-team technical reviews** and sprint planning with business analysts, translating strategic priorities into actionable engineering backlogs.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Implemented **React components** for customer-facing checkout flows, collaborating with designers to ship responsive interfaces aligned with brand guidelines.
- Built **Python REST APIs** supporting order management features, writing integration tests that covered 85% of critical business logic paths.
- Contributed to **startup product launches** from prototype to beta, participating in daily standups and rapid iteration cycles with a 6-person engineering team.
- Optimized **frontend bundle size** through lazy loading and memoization, improving initial page load times by 22% on mobile devices.
- Documented **API schemas and deployment runbooks**, enabling smoother handoffs as the platform scaled from early adopters to broader release.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Developed **responsive web pages** for nonprofit fundraising campaigns using HTML, CSS, and JavaScript, ensuring accessibility across desktop and mobile browsers.
- Integrated **third-party payment widgets** and donation forms, validating end-to-end flows and resolving cross-browser compatibility issues before launch.
- Collaborated with stakeholders to translate **content requirements** into maintainable page templates supporting multiple concurrent campaigns.
- Implemented **basic analytics tracking** to measure visitor engagement, providing weekly reports that informed outreach strategy adjustments.
- Maintained **legacy CMS content** and performed bug fixes under tight deadlines during a 10-week engagement.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Redux, Webpack

Backend: Python, Go, Node.js, REST APIs, GraphQL, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MongoDB, Redis, DynamoDB, SQL

Cloud & DevOps: AWS, Kubernetes, Docker, Terraform, CI/CD, GitHub Actions

Monitoring & Tools: Datadog, Prometheus, Grafana, Sentry, Jest, Cypress, Postman

Workflow & PM: Agile/Scrum, Jira, Confluence, Technical Leadership, Cross-functional Collaboration
