PROFESSIONAL SUMMARY

Senior full-stack engineer with 7+ years delivering consumer-facing and enterprise web products from initial design through production. Skilled in React, Python, Go, and microservice architectures on AWS and Kubernetes. Proven leader of cross-team initiatives, internal tooling, and API design, partnering with designers and stakeholders to ship secure, high-performance applications.

WORK EXPERIENCE

Software Engineer

May/2022 - May/2026

Aspen Capital

Remote | 10th Floor, New York

- Architected and maintained **consumer-facing React applications** serving 50K+ monthly active users, owning critical UI flows from concept through production across portfolio analytics and client reporting modules.
- Designed **Python and Go microservices** with REST and GraphQL APIs, decoupling monolithic workflows into independently deployable services that improved release cadence by 40%.
- Built **internal developer tooling** including scaffolding CLIs and CI templates that reduced time-to-ship for new product initiatives from weeks to days across three engineering squads.
- Led a cross-functional initiative with designers and researchers to **redesign onboarding UX**, cutting drop-off rates by 28% through responsive layouts, accessibility improvements, and performance tuning.
- Deployed services on **AWS with Kubernetes**, implementing secure authentication, encrypted data pipelines, and infrastructure-as-code practices that met institutional compliance requirements.
- Mentored four engineers on **full-stack best practices**, code review standards, and API contract design while driving quarterly technical roadmaps aligned with business priorities.
- Implemented **ML inference integration** for document classification features, partnering with data science to productionize model endpoints behind rate-limited gateway services.
- Optimized frontend bundle size and API latency through **code splitting and caching strategies**, achieving sub-200ms p95 response times on core dashboard views.

Technology Analyst, Incoming Technology Analyst, Technology Summer Analyst,

May/2019 - Apr/2022

BNP Paribas

Remote | Seventh Avenue, New York

- Developed **full-stack trading and risk dashboards** with React and Angular for front-office analysts, delivering responsive interfaces consumed by 200+ daily users across global desks.
- Built **Python microservices** for portfolio data aggregation, defining API models and event-driven contracts that integrated with legacy mainframe feeds and downstream reporting systems.
- Collaborated with UX designers and business stakeholders to **translate wireframes into production UI**, ensuring visual consistency and secure handling of sensitive financial data.
- Contributed to **cloud migration efforts on AWS**, containerizing batch jobs and establishing monitoring hooks that improved deployment reliability for critical overnight processes.
- Led a team initiative to standardize **frontend component libraries**, reducing duplicated UI code across five internal applications and accelerating feature delivery for compliance reporting tools.
- Implemented automated integration tests and **API validation pipelines** that caught regression defects early, lowering production incident frequency during quarterly release cycles.

Software Engineering Intern

Jun/2018 - May/2019

Chexology

Remote | 17th Floor, New York

- Shipped **React features** for a consumer check-management platform in a fast-paced startup environment, integrating REST APIs for real-time payment status updates.

- Improved **mobile-responsive layouts** across checkout flows, partnering with design to refine component behavior and visual polish for end users on varied screen sizes.
- Developed **Python backend endpoints** supporting user authentication and transaction history, following microservice patterns established by senior engineers on the team.
- Participated in agile ceremonies and **cross-functional sprint planning**, contributing estimates and implementation plans for user-facing enhancements from concept through release.
- Wrote unit and integration tests for **critical payment workflows**, helping maintain stability as the product scaled its early customer base.

Web Developer

Sep/2017 - Nov/2017

Bayesquare Foundation

Remote | New York

- Built **responsive web pages** for a nonprofit foundation site using HTML, CSS, and JavaScript, improving content accessibility for donors and program stakeholders.
- Integrated **third-party donation APIs** and form handlers, ensuring reliable submission flows and basic input validation for public-facing fundraising pages.
- Collaborated with stakeholders to **iterate on UX layouts** based on feedback, adjusting navigation structure and visual hierarchy to support campaign launches.
- Maintained and deployed site updates through **version-controlled workflows**, documenting changes for handoff to foundation leadership at engagement completion.

EDUCATION

New York University

Bachelor of Arts (B.A.), Computer Science

2016-2020

SKILLS

Frontend: React, Angular, Vue.js, TypeScript, JavaScript, HTML5, CSS3, Responsive Design, Web Performance Optimization

Backend: Python, Go, Rust, Node.js, REST APIs, GraphQL, Microservices, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS, Azure, Google Cloud, Kubernetes, Docker, Terraform, CI/CD

Monitoring & Tools: Datadog, Grafana, Prometheus, Git, Jenkins, GitHub Actions

Workflow & PM: Agile/Scrum, Jira, Cross-functional Collaboration, Technical Roadmapping, Mentorship
