

RYAN M. CHO

Lead Full-Stack Engineer

New York, NY 10006 | Ryanmcho100@gmail.com | linkedin.com/in/ryan-cho-2020 | github.com/Chomama

PROFESSIONAL SUMMARY

Results-driven Lead Full-Stack Engineer with **7+ years** of experience architecting and delivering high-scale microservices and distributed systems in regulated financial environments. Proven leader in migrating monolithic legacy systems to cloud-native platforms (AWS, Kubernetes) to improve system resilience and deployment velocity. Expert in building modern, responsive frontends (React, TypeScript) and robust backend services (Node.js, Java, Python). Adept at leading Agile teams, mentoring engineers, and leveraging AI-assisted tooling to enhance productivity and deliver complex, business-critical features with stringent compliance requirements.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), Redux, HTML5, CSS3, Responsive UI/UX

Backend: Node.js, Java (Spring Boot), Python, Go, REST APIs, GraphQL, Microservices Architecture

Databases: PostgreSQL, MongoDB, SQL Server, Redis, Elasticsearch

Cloud & DevOps: AWS (EC2, S3, RDS, EKS), Azure, GCP, Docker, Kubernetes, Terraform, CI/CD (Jenkins, GitHub Actions)

Monitoring & Tools: Datadog, Prometheus, Grafana, Git, Agile/Scrum, Jira, Confluence

PROFESSIONAL EXPERIENCE

Aspen Capital

May 2022 – May 2026

Software Engineer

- ▶ Architected and delivered high-availability microservices on AWS (EKS) for critical investment operations, supporting high-volume, compliance-driven regulatory reporting pipelines across multiple business units.
- ▶ Led technical design and code reviews, mentoring a team of 4 engineers in distributed system patterns, Domain-Driven Design, and modern API development with TypeScript and Node.js.
- ▶ Engineered a portfolio analytics dashboard using React and TypeScript, integrating with Java backend services to provide real-time visibility and improve decision-making for finance stakeholders.
- ▶ Designed scalable data models using PostgreSQL and MongoDB, ensuring high-throughput transaction processing and strict data consistency for financial operations.
- ▶ Modernized the deployment pipeline, implementing CI/CD with Docker and Terraform to reduce production release cycles and automate testing and infrastructure provisioning.
- ▶ Integrated Elasticsearch to optimize search and document screening workflows, cutting query latency by over 40% for operations teams.
- ▶ Introduced AI-assisted development tooling, accelerating complex refactoring, automated test generation, and cross-service documentation, significantly improving team velocity.

BNP Paribas

Aug 2019 – May 2022

Technology Analyst

- ▶ Developed and maintained Java and Python backend services on Azure to support global trade finance and regulatory compliance workflows.
- ▶ Built full-stack internal tools using JavaScript, HTML/CSS, and SQL, streamlining critical processes like client screening, onboarding, and audit-ready report generation.
- ▶ Drove the migration of legacy monolith components to Dockerized microservices, improving deployment independence and scalability for multiple analyst teams.
- ▶ Optimized RDBMS queries and stored procedures on SQL Server, significantly improving batch processing performance for high-volume reconciliation jobs.
- ▶ Collaborated with legal and compliance stakeholders to implement robust screening features with auditable, traceable logging for all critical actions.
- ▶ Mentored incoming summer analysts, fostering a culture of quality through code review standards, test-driven development, and pair programming.

Chexology

Summer 2019

Software Engineering Intern

- ▶ Engineered features for a SaaS check-management platform, developing interactive frontend components with JavaScript and HTML/CSS.
- ▶ Built and integrated REST APIs to connect front-end forms with backend services, ensuring robust input validation and error handling.

- Wrote SQL queries and data access layers to power client-facing reporting dashboards.

Bayesquare Foundation

Sep 2017 – Nov 2017

Web Developer

- Developed and maintained responsive web pages and interactive components to support non-profit digital outreach and donor engagement.

EDUCATION

New York University

2016 – 2020

Bachelor of Arts (B.A.) in Computer Science

Relevant Coursework: Data Structures & Algorithms, Web Development, Database Systems, Operating Systems, Distributed Systems.
