PROFESSIONAL SUMMARY

Senior software engineer with 12+ years building scalable SaaS platforms, automation pipelines, and AI-enabled full stack products. Led cross-team architecture for document generation, workflow automation, and real-time content systems serving high-traffic media and enterprise users. Expert in React, Node.js, Python, cloud-native delivery, and mentoring engineers through complex platform migrations.

WORK EXPERIENCE

Senior Software Engineer

Aug/2022 - Mar/2026

TechCrunch

Remote | San Francisco, California

- Architected an **AI-driven editorial automation platform** orchestrating ingestion, enrichment, and publishing for 3 product squads, reducing manual handoffs in daily content workflows.
- Led **full stack modernization** of the internal CMS from a monolithic Ruby stack to 8 Node.js and React microservices on AWS, enabling independent service deployments for editorial tooling.
- Designed a **document generation service** producing JSON and PDF exports for 500+ internal stakeholders, with environment-driven storage routing separating production and staging output directories.
- Built **real-time event streaming pipelines** with Kafka and Node.js handling 50K+ lifecycle events per minute, giving editorial and growth teams immediate publish-state visibility.
- Partnered with product leadership to define a **platform roadmap for AI-assisted authoring tools**, translating executive priorities into phased milestones across multiple quarters.
- Implemented **CI/CD automation** via GitHub Actions and Docker across 12 repositories, standardizing release gates and shortening rollback recovery during peak traffic.
- Consolidated legacy REST endpoints into a **unified GraphQL API layer**, simplifying integrations for web and mobile surfaces while preserving backward compatibility for existing consumers.
- Mentored 6 engineers on **React, TypeScript, and test-driven development**, establishing code review standards and pairing practices that improved squad delivery consistency.
- Optimized **PostgreSQL and Redis caching** for high-read editorial APIs, lowering p95 latency on critical listing and search endpoints under sustained traffic.

Senior Fullstack Engineer

Oct/2020 - Jul/2022

Golden Technology

Remote | Glendale, Ohio

- Owned the **end-to-end SaaS analytics dashboard** serving 200+ enterprise healthcare clients with React frontends and Node.js services over multi-tenant datasets.
- Built **REST and WebSocket APIs** for near-real-time patient and facility data visualization, coordinating schema design with clinical stakeholders under HIPAA-aligned access controls.
- Led a **frontend migration** from Angular to React with shared component libraries across 5 reporting modules, improving maintainability and release velocity.
- Designed **role-based access control** with OAuth2 and SAML for admin, analyst, and read-only tiers, enforcing least-privilege data exposure across the platform.
- Established an **automated testing strategy** with Jest and Cypress reaching 85% coverage on critical paths, increasing release confidence for regulated healthcare workflows.
- Deployed services on **AWS ECS with Terraform** using blue-green patterns across staging and production, enabling zero-downtime releases for customer-facing analytics.
- Mentored 4 engineers on **full stack design patterns** and observability practices, reducing recurring production defects in shared services.
- Introduced **Datadog and Sentry monitoring** with SLO-based alerting across 9 services, shortening mean time to detection for customer-impacting incidents.

Fullstack Developer

Jun/2018 - Sep/2020

IgniteTech

Remote | Austin, TX

- Delivered **full stack features** for a B2B marketing automation SaaS platform supporting 1,000+ mid-market customers with campaign builders and segmentation tools.
- Built **React UI modules and Node.js APIs** for a drag-and-drop workflow editor, enabling non-technical users to configure multi-step outreach sequences without engineering support.
- Integrated **CRM connectors** for Salesforce and HubSpot with resilient sync jobs, handling rate limits and partial failures while keeping contact data consistent.
- Improved **MongoDB performance** through compound indexing on high-volume campaign collections, reducing slow-query incidents during peak send windows.
- Implemented **background job processing** with Redis and Bull for scheduled sends and webhook retries, decoupling long-running tasks from request/response API paths.
- Contributed **AWS Lambda functions** for inbound webhook normalization and fan-out processing, lowering operational overhead for bursty integration workloads.

Frontend Developer

2014 - May/2018

Duda

Onsite | Louisville, Colorado

- Developed **responsive website builder interfaces** on a multi-tenant SaaS platform powering 500K+ published sites for agencies and small businesses.
- Built a **JavaScript widget library** with themeable components and WCAG 2.1 accessibility patterns adopted across customer-facing editor and preview experiences.
- Improved **front-end performance** through code splitting, lazy loading, and asset pipeline optimizations that strengthened Lighthouse scores on editor surfaces.
- Partnered with UX to evolve a **shared component design system**, standardizing interaction patterns and reducing one-off UI implementations across product squads.
- Integrated an **A/B testing framework** into feature rollout workflows, supporting experiment assignment and metric collection for data-informed product decisions.
- Maintained **cross-browser compatibility** across modern and legacy browsers, resolving rendering and scripting edge cases on customer sites with diverse third-party embeds.

EDUCATION

Georgia Institute of Technology

Bachelor's degree in Information technology

2008-2013

SKILLS

Frontend: React, TypeScript, JavaScript, HTML5, CSS3, Angular, Redux, Webpack, Responsive Design, WCAG Accessibility

Backend: Node.js, Python, GraphQL, REST APIs, WebSockets, Microservices, Kafka, Redis, Bull, OAuth2, SAML

Databases: PostgreSQL, MongoDB, Redis, Query Optimization, Schema Design, Multi-Tenant Data Modeling

Cloud & DevOps: AWS (ECS, Lambda, S3), Docker, Terraform, GitHub Actions, CI/CD, Infrastructure as Code, Environment Configuration

Monitoring & Tools: Datadog, Sentry, Git, Jest, Cypress, Postman, Chrome DevTools, Lighthouse

Workflow & PM: Agile/Scrum, Technical Roadmapping, Cross-Functional Leadership, Mentorship, Stakeholder Communication, Code Review

CERTIFICATIONS

- Google Analytics

PROJECTS

Healthcare Platform (AI-Driven, HIPAA-Compliant System)

- Led development of a **HIPAA-compliant healthcare platform** combining React dashboards, Node.js services, and AI-assisted triage workflows for clinical operations teams.
- Implemented **audit logging, encryption, and RBAC** aligned to healthcare compliance requirements while supporting real-time patient data views for authorized users.

Shipment & Logistics Platform (Real-Time Tracking System)

- Built a **real-time shipment tracking platform** with map-based visibility, WebSocket location updates, and exception alerting for logistics coordinators.
- Designed **event-driven backend services** integrating carrier APIs and warehouse systems to maintain accurate delivery state across high-volume order flows.
